

AI FREEDOM MACHINE — AUTO-PILOT · WHAT IT CAN DO

Meet your team

Fourteen AI specialists, plus the jobs that keep running while your computer is on during your working hours. They do the heavy lifting; you review and decide.

⚙️ Auto-Pilot Edition · 14 agents · on request + on a schedule

A map, not homework. In the Claude app's **Code** tab, with your AI Freedom Machine folder chosen, say **"let's get started"** (or **"menu"**) anytime to see your team. Type a number or just say what you want in your own words. The "try saying" lines are only examples. Nothing has to be done in order.

● How your team works

- **It asks a few questions first**, one at a time, with options to tap, and only the ones that change the result. Say "just make it" and it makes a sensible choice and tells you what it assumed.
- **It does the work, then speaks up.** Every piece ends with a 💡 **My recommendation:** one or two specific improvements, and the next step, naming the teammate who does it.
- **You approve everything.** Nothing is sent, posted or spent without your yes: ads are built **paused**, posting stays in **preview** until you say go, and it asks before running things or saving files.
- **It remembers.** Everything is saved in your folder (`client-config.md` , `Product` , `Content`), so no agent asks twice.
- **It suggests tools only when they help** (for example Metricool for scheduling, GoHighLevel for an all-in-one funnel, Telegram for free phone alerts), with the free option mentioned and always skippable. Already using something that works? It supports that instead.

● Build & launch

Agents 1–11 are the same team as Co-Pilot. Where Auto-Pilot does more, it says so.

1

Idea Validator

"Check my idea will sell"

A warm, ten-minute check before you build: who it's for, the problem, visible demand, what people would pay, and how it's different. It points out any red flags, kindly.

TRY SAYING `check my idea` `will this sell?` `help me pick a niche`

YOU GET A clear **Go / Refine / Pivot** verdict with specific recommendations, saved and handed to your Product Builder.

2

Product Builder

"Build my product"

Interviews you one question at a time (your story, audience, promise, format, name, brand look), recommends the strongest version, then writes, designs and renders the whole product.

TRY SAYING `build my product` `turn my idea into a product` `make my PDF`

YOU GET A premium, branded PDF in your `Product` folder, the same file your buyers receive. Images come from your own photos, Canva, or prompts to fill each slot.

3

 Sales Page Agent*"Build my sales page"*

Writes a complete, conversion-focused page in your voice, or reviews a page you already have. Helps you publish it on GoHighLevel or your own site, with a buy button tested before you share it.

TRY SAYING build my sales page review my sales page my page isn't converting

YOU GET Full page copy plus a styled page file in your brand colors, saved in your folder. You publish it.

4

 Email & DM Agent*"Write my emails & DM scripts"*

Writes ready-to-use sequences in your voice: welcome, sales, delivery, post-purchase and abandoned-checkout emails, plus comment-to-DM (ManyChat) and auto-reply scripts.

TRY SAYING write my emails write a welcome email sequence write my ManyChat DM scripts

YOU GET Each email with subject, preview text and body. A short, warm **delivery email goes out automatically** with every sale (your product attached or linked); the welcome sequence your agent writes lives in your email tool.

5

 Content Creator*"Make this week's content"*

Plans a week in your voice (usually 7–10 pieces, mostly reels) using proven hook and format rules, then **renders** finished posts, carousels, stories and ad images, and silent text reels as MP4s, in your brand colors. To publish, schedule the week into Metricool with you in a session, or switch on the built-in Facebook/Instagram poster, which posts on each date and stays in **preview** until you say go.

TRY SAYING make this week's content render my reels schedule my posts

YOU GET A week of finished files to look over, re-rendered until you love them. With the AI writing key, the whole week can research, write and render itself each week. Instagram video reels and Facebook stories are flagged for you to post by hand.

6

 Launch Guide*"What's left + my launch-day plan"*

Reads everything you've built and connected, shows what's done and what's left in the right order, and hands each open item to the right teammate.

TRY SAYING what's left before I launch? am I ready to launch? give me my launch-day plan

YOU GET A friendly   checklist and a calm launch-day plan.

7

 Setup & Connections*"Connect my accounts"*

Opens your local **connect page** and walks each card with you, one at a time: Stripe, email delivery, your product, phone alerts, the AI writing key, social posting, Meta ads and GoHighLevel. Tells you exactly where to find each item, then tests it.

TRY SAYING connect my accounts connect Stripe set up phone alerts

YOU GET Green checks on each card and your keys saved privately on your computer, never in the chat. Then it hands you to your Automation System.

 Grow

8

 Meta Ads Agent*"Run my Meta ads"*

First, an honest check that your product and page are ready. Then it writes 4–6 distinct ad angles, renders the image creative, scripts video ads, and builds the campaign **PAUSED** in your own ad account. Adds a **daily automatic results check** sent to your phone.

TRY SAYING set up my Meta ads write my ad copy how are my ads doing?

YOU GET Claim-safe ads and a plain read on each (keep it, refresh the hook, consider switching it off, or check your page) with one recommended move. **It never switches an ad on, raises a budget or spends a dollar.**

9

 Upsell Builder*"Make more per sale"*

Explains the options in plain English (order bump, one-click upsell, downsell, second product), then designs **one** at a time, and can help wire it into your checkout.

TRY SAYING make more per sale design an order bump help me plan a second product

YOU GET The offer, its price and the real copy, saved to your folder.

10

 Business Dashboard*"How am I doing?"*

Reads your real data directly, read-only: sales and revenue from Stripe, what went out from your content plan (and Metricool, if connected), ad results, your goal and your connections. No numbers to paste.

TRY SAYING how am I doing? show my numbers what should I do next?

YOU GET A clean snapshot in the chat, ending with a short, prioritized "what to do next."

11

 Customer-Support Assistant*"Answer my customers"*

Reads your support inbox (read-only), tells you what's waiting, and drafts warm replies in your voice. A reply goes out, in the same thread, only after you approve it. For "I didn't get my product", it can **re-send the product itself**.

TRY SAYING check my inbox draft replies to my customers a buyer didn't get their product

YOU GET Your inbox triaged, replies ready to approve, and a reusable FAQ. Refunds, complaints and anything about money always wait for you; refunds are clicked in Stripe.

● **Runs on its own**Auto-Pilot only

12

 Auto-Pilot Automation System*"Turn on / check my automations"*

Switches on the jobs below, shows what's running in plain English, and changes or pauses anything the moment you ask. Everything runs inside your working hours. Pausing a job never deletes content, sales history or settings.

TRY SAYING turn on my automations what's running? change my working hours
review my held posts

YOU GET Only the jobs whose connections are ready, each added on your yes, and a plain summary of when each one runs.

13

 Finance Assistant*"My money & books"*

A calm, judgment-free bookkeeper that meets you where you are: a simple income-and-expense spreadsheet, help setting up or tidying QuickBooks Online (review-first), categorizing receipts, and plain-English money and tax questions.

TRY SAYING help me with my books categorize my expenses get me ready for my accountant

YOU GET A monthly profit-and-loss summary in the chat, a year-end package for your accountant, and a weekly finance text. **Nothing is posted to your books without your OK.** It isn't an accountant, and says so on tax questions.

14

 Health Check*"Is everything working?"*

A read-only check of every connection, every scheduled job (and when it last ran), any paid sale not yet delivered, your folder location and your working hours.

TRY SAYING is everything working? health check why didn't my buyer get their product?

YOU GET A plain  /  /  picture of what it means, and an offer to fix each  with your OK. It never changes a setting on its own.

● Your automation schedule

Your Automation System (12) offers only the jobs whose connections are ready, and you choose the days. All of them run inside your working hours.

Job	When	What it does	Needs
Sale watcher	Every hour	New paid order → product emailed → text to your phone → buyer added to your CRM	Stripe + email
Weekly summary	Weekly	Sales and revenue for the week, to your phone	Stripe (+ Telegram)
Weekly content	Weekly	Research → write the week → render images and reels, in order	AI writing key (or render-only)
Posting	Daily	Posts each rendered piece on its date (preview until you go live)	Facebook/Instagram
Daily ads check	Daily	Reads your Meta results and texts recommendations; never changes anything	Meta ads
Ad upload	Weekly	Uploads ads waiting in your ads folder, as PAUSED	Meta ads + a campaign
Weekly finance report	Weekly	Revenue, refunds, expenses and profit, to your phone. Real numbers only	Stripe (+ Telegram)
Weekly health check	Weekly	Runs the full check and texts you the result	Telegram

What needs you (honestly).

- **Your computer, on, awake, and you're logged in** (a locked screen is fine) during your working hours. If your computer is asleep at the scheduled time, the job runs when it wakes (inside your hours). If it was off, or you were logged out, a daily job simply runs the next day, and a weekly job tries again the next day or two if those are working days; if it still misses, just say "run my weekly content now" to catch up. **Mac:** one switch stays ON: the **Node.js Foundation** entry in **System Settings** → **General** → **Login Items & Extensions** (called just Login Items on macOS 13 and 14; it may show as node or Unknown Developer; nothing there says AI Freedom Machine). If it's ever off, your automations stop until you turn it back on.
- **Your yes to go live:** posting stays in preview, and ads stay paused, until you decide. Held posts (anything that reads like an earnings claim or a guarantee) wait for your review.
- **The AI writing key is optional and billed separately by Anthropic**, usually a few dollars a month for weekly content. Without it, nothing breaks: you write the week together in a session and the rest still runs.
- **Your accounts, your final clicks:** you create your accounts, publish your page, switch ads on in Ads Manager and click Refund in Stripe.
- **Your story and your face.** Your team never invents a story, result or testimonial. Talking reels are yours to film (or voice with an AI avatar), and optional.
- **Your accountant** for anything that affects what you file or owe.
